

Press release 8/2012, March 12, 2012

Orlaco's visual systems are widening the horizon of drivers and operators worldwide

Highest quality standards are ensured by using BINDER FED ovens

Orlaco is Europe's leading specialist for camera systems in commercial vehicles, forklift trucks, cranes and ships. Vision is their mission. Equipped with Orlaco camera systems, large naval vessels can be precisely maneuvered in almost any visibility conditions. And while unloading ships, crane operators in harbors like Rotterdam or Felixstowe (UK's largest container port) appreciate Orlaco visual systems as well. Drivers and operators around the world can keep their "eyes on" whenever it matters.

A Dutch success story

Since 1988, Orlaco has been specializing in camera and monitor systems for a wide range of vehicles, with the vision to improve visibility. Orlaco started off as a family business in Barneveld, the Netherlands. Right from the start the Van Beusekom family took the initiative and now, more than twenty years later, Orlaco has developed into a sizable international business with more than 120 members of staff.

Orlaco exports to more than 50 countries and has 10 international subsidiaries. Using Orlaco systems, visibility problems on vessels and vehicles, cranes, forklift trucks and industrial environments can be solved almost completely today. The Dutch company can provide customized solutions for special requirements in virtually any field of visibility improvement.

An eye for quality

Orlaco has a trained eye for quality. During the development of a camera system, every step from research to production to customer-service is taken in-house, at Orlaco in Barneveld.

All processes are streamlined into an efficient approach. Like in the environment, innovation is the key to success. To ensure a long lifetime of the products, Orlaco camera systems are subjected to a precise aging simulation using three BINDER [FED ovens](#) which are particularly well suited for this purpose.

The multi-talented BINDER heating chamber of the [FED series](#) provides almost unlimited capacity and is particularly adaptable. With advanced timing functions and a digitally controllable fan, this heating chamber easily controls temperature and convection conditions. The APT.line™ preheating chamber technology uniquely simulates a natural environment.

A commitment to excellence

In their pursuit of excellence Orlaco and BINDER have much in common. Both companies manufacture their products exclusively in-house in state-of-the-art factories to ensure compliance with the highest quality standards. Binder and Orlaco invest a lot of effort in research and development. While Orlaco made Vision their mission, BINDER committed itself to providing significant contributions to the improvement of health and safety of mankind. Together, Orlaco and BINDER help widening the horizon of drivers and operators worldwide.
